

Catering Booking and Management System

Project Overview

This system is a complete web-based solution designed to streamline the catering booking process for both customers and catering service providers. It enables customers to easily browse menu items, submit event requirements, and track their booking status, while allowing the catering owner to manage orders, generate quotations, and handle approvals efficiently.

The platform supports dual user roles:

- Customer
- Catering Owner

It also includes multilingual support (English and Tamil) to ensure accessibility for a wider audience.

1. User Roles and Access

Customer

Customers can:

- Browse menu items
- Submit booking requests
- Track order status
- View quotations and complete payment

Catering Owner

The owner can:

- View incoming orders
 - Review customer requirements
 - Enter pricing details
 - Approve or reject orders
 - Generate quotation documents
-

2. Website Workflow (End-to-End)

Step 1: Customer Login / Access

The customer enters the website and can log in or proceed to explore the menu.

Step 2: Menu Browsing and Selection

Page: Menu Page

Functionality:

- Displays 200+ food items categorized into:
 - Main Dishes
 - Side Dishes
 - Sweets
 - Beverages
- Each item is shown with:
 - Image
 - Name
- Customers can:
 - Select items
 - Deselect items

Purpose:

Allows customers to define their preferred menu without worrying about quantity.

Step 3: Event Details Submission

Page: Booking Details Page

Functionality:

Customers enter:

- Function Name
- Event Date
- Event Location
- Number of Guests

- Requirement of Supply Boys (Yes/No)

Purpose:

Collects essential inputs required for quotation preparation.

Step 4: Booking Confirmation**Action: Book Order****Functionality:**

- System generates a **unique Booking ID**
 - Creates an **Initial Booking PDF** containing:
 - Selected menu items
 - Event details
 - Stores booking in database with status:
→ "Processing"
-

Step 5: Status Tracking**Page: Status Checking Page****Functionality:**

- Customer enters Booking ID
- System displays status using a timeline-based UI

Status Stages:

- Processing (Initial stage)
- Approved
- Rejected
- Payment Pending
- Completed

Purpose:

Provides transparency and real-time tracking.

Step 6: Owner Dashboard

Page: Owner Orders Page

Functionality:

- Displays all orders as cards
- Orders are color-coded:
 - Blue → New / Pending
 - Green → Approved
 - Red → Rejected

Purpose:

Quick overview and easy order management.

Step 7: Order Detail and Quotation Entry

Page: Order Details Page (Owner)

Functionality:

- Displays:
 - Customer details
 - Selected menu items
 - Event information
- Owner enters:
 - Amount for each food item (manual input)
 - Service charges (e.g., supply boys)
- System:
 - Automatically calculates total amount

Purpose:

Allows flexible and real-world pricing control.

Step 8: Quotation Generation

Action: Approve Order

Functionality:

- Generates a **Quotation PDF** including:
 - Item-wise pricing
 - Service charges
 - Total amount
 - Updates order status → "Approved"
-

Step 9: Customer Receives Quotation

Page: Status Page (Updated)

Functionality:

- Displays approved status
 - Shows quotation PDF
 - Displays payment options (QR / online payment)
-

Step 10: Payment Processing

Functionality:

- Customer completes payment via integrated payment gateway
 - System:
 - Updates status → "Payment Completed"
 - Generates payment confirmation / receipt
-

Step 11: Final Confirmation

Customer receives:

- Confirmation of booking
 - Payment proof
 - Final order status
-

3. Key Features

1. Dual Login System

Separate interfaces for customer and catering owner.

2. Dynamic Menu Selection

Large menu with categorized browsing and easy selection.

3. Flexible Pricing Model

Owner manually defines pricing based on:

- Guest count
- Menu complexity
- Service requirements

4. Automated PDF Generation

- Initial Booking Summary
- Final Quotation Document

5. Real-Time Status Tracking

Booking progress displayed using a timeline system.

6. Payment Integration

Secure online payment with instant confirmation.

7. Multilingual Support

- English
 - Tamil
- Toggle option for better user experience.

4. Business Value

This system provides:

- Faster booking process
- Reduced manual communication
- Transparent pricing workflow
- Better customer experience

- Efficient order management for the owner
-

5. Conclusion

This platform transforms traditional catering booking into a structured digital workflow. It ensures clarity for customers and operational efficiency for the catering business, making it scalable, user-friendly, and suitable for real-world deployment.
